

XtraLick® Horse

Mineral Lick

XtraLick® Horse lick contains trace elements and herbs needed by horses and ponies. The licks are durable and have enhanced palatability from apple flavoring and the herb, fenugreek.

XtraLick® Horse can be fed all year round, at grass or in the stable and will help keep the horse in good condition. The 5 kg size and the ease of 'hanging' from a gate post or beam makes feeding particularly easy for individuals or small groups. The box is also very conveniently carried with no 'mess' on the hands or in the vehicle!

1. Composition

XtraLick® Horse is a mineralized salt block – based on human grade Cheshire crystal salt. Horses can regulate their intake of salt so that at times of higher demand they will take more. This can be where horses are sweating from work, or perhaps a nervous individual or even where intake of compound feed (containing salt, minerals and vitamins) is restricted.

The lick's essential trace elements help in some of the following ways:

- The zinc is 'protected' and will help keep coat and hooves in excellent condition.
- High levels of copper are important for horses, particularly in areas of the country where molybdenum and other minerals combine to limit the availability of copper in the diet.
- With appropriate amounts of manganese, selenium, cobalt, iron and iodine fertility is also catered for in the formulation.
- Selenium deficiency is, particularly, a potential problem in horses in this country. Selenium shortages can be linked to unthriftiness and even muscle tie-up symptoms.
- As well as trace elements the formulation contains organic seaweed, with rosehip included as an aid to respiration.
- Cod liver oil in the formulation will help retain good coat condition, and general health.

2. Use

XtraLick® Horse can be supplied to the following livestock:

- Horses and other equines

2. Packaging / Shipping

XtraLick® Horse is shipped per 20' FCL on pallets.

Packaging details:

1 x 5 kg licks per carton

240 cartons per pallet

20 pallets per 20' FCL

Total licks per 20' FCL: 2 400

Total net weight: 24 000 kg
